    The adhesive compns. contain an unsatd. carboxylic acid or
     anhydride-modified polyolefin 12-76, polyolefin 4-68, and a complex salt
     hydrate (consisting of .gtoreq.2 components selected from oxide,
     carbonate, and hydroxide of Mg, Al, and Si, where a Mg compd. is
     essential) 0.1-20%. The anticorrosive compns. have good adhesion to
     metals. Thus, 99.5% 80:20 maleic anhydride-grafted polypropylene
     [25722-45-6]-polypropylene [9003-07-0] mixt. and 0.5% 2.5MgO.Al203.xH20
     were kneaded together, pelletized, and molded into a sheet having good
     peel strength when hot-pressed on an Fe sheet.
